

"Reduce the Footprint" Trend as a Percentage (FY 2015 - FY 2017)

Definition: Reduce the Footprint was calculated by adding usable square footage of occupancy agreements given by the Public Buildings Service at GSA together with applicable square footage as reported by agencies in the FRPP (Federal Real Property Profile) dataset. Reduce the Footprint is calculated by dividing current year usable square footage by the baseline (2015) square footage. The indicators below depict if an agency had an increase, no change, or reduction from the baseline year.
